Fourth-year Information Technology student specializing in full-stack web and system development. Experienced in building academic, personal, and freelance projects involving APIs, data visualization, and AI-integrated solutions. Seeking an internship to apply skills in a professional environment.

Experience Overview

Academic, Personal & Freelance Projects

- Developed full-stack web applications using Laravel, Angular, and Tailwind CSS
- Built and consumed RESTful APIs for frontend-backend communication
- Implemented authentication systems, dashboards, and role-based access control
- Designed and integrated data visualization dashboards for analytics and reporting
- Developed and integrated custom AI features into web systems
- Applied machine learning workflows using Roboflow for intelligent system features
- Designed structured and scalable databases using MySQL and Supabase
- Containerized applications using Docker for consistent development environments
- Collaborated with clients to analyze requirements and deliver custom system solutions
- Deployed selected projects to AWS cloud environments

Key Skills

- Full-Stack Web Development (Laravel, Angular)
- RESTful API Development
- Data Visualization & Dashboards
- AI Integration & Machine Learning Basics (Roboflow)
- Database Design (MySQL, Supabase)
- DevOps Basics (Docker, AWS)
- UI/UX Design (Tailwind CSS, Figma)

Education

Bachelor of Science in Information Technology

Institution: **Leyte Normal University**

Expected Graduation: 2026

- 4th Year – 2nd Semester
- Academic Scholarship Recipient
